Exegy available via Thomson Reuters RMDS

St. Louis, MO – June 18, 2012 – Exegy, Inc., the market data systems company, announced today that customers of Thomson Reuters using the RMDS market data system can now access ultra low latency data processed by the Exegy Ticker Plant.

Scott Parsons, chief technology officer at Exegy said, “The Reuters market data distribution system is a standard in many global banks. Exegy has over 150 feed handlers immediately available for use with RMDS, and we plan to expand the feeds and functionality available through that platform.”

The software adapters that convert the Exegy format into RMDS are offered by integration specialists Rai Technology. David Ashburner, chief executive officer of Rai Technology added, “Thomson Reuters customers can now combine market data from RMDS with high quality ultra low latency data from direct feeds using the Exegy Ticker Plant. We've had quite a bit of interest from our customers in this solution and we're excited to be adding Exegy to our rich set of integration capabilities.”

About Exegy, Inc.:

Exegy provides ultra-high performance hardware-accelerated computing solutions that efficiently process and enrich the handling of market data for the world's leading financial organizations. Exegy's unique products respond to financial organizations' growing demands for capacity, low latency, reduced cost of ownership and flexibility. Exegy's products are compatible with leading operating systems and interconnects. For more information, please visit www.exegy.com.

A single Exegy Ticker Plant provides all the updates for www.MarketDataPeaks.com, the first

public website that provides a minute-by-minute account of the aggregated volume of market data messages across major North American exchanges. The site is sponsored by Exegy, Essex Radez and the Financial Information Forum.

About Rai Technology Inc.:

Rai Technology provides high performance products for managing, distributing, integrating and monitoring real-time financial data. The Rai platform offers highly configurable protocol and transport bridging between architectures introducing new integration possibilities for both internal and external market data sources.
